MONTAGEBOY

MBO-T Montageboy – table version

Gripper Montageboy – efficient gripper building directly on the part With the gripper Montageboy, building grippers is more efficient than ever. Instead of laborious planning at the desk, the Montageboy lets you build the gripper directly on the real part – fast, precise and practical. Thanks to the mobile system and the integrated clamping fixture, gripper components can be positioned flexibly and ergonomically. The result is a perfectly fitting gripper in the shortest possible time, without detours. Advantages: - Direct assembly on the original part - Time savings through hands-on work - Higher precision when aligning the gripper - Mobile and flexible use in production

ADVANTAGES

- V1 - simple, efficient gripper building
- V2 - function check of the gripper
- V3 - reproducibility – gripper – part

REMARK

- - Gripper quick-change system GWS-1 or GWS-2
- - Clamping fixture for the moulded parts
- - Vacuum generation via integrated venturi nozzle
- - Vacuum monitoring via pressure gauge
- - Function check of the active elements (fingers, tongs etc.) via integrated compressed-air valve
- - Centring aid – gripper centre = workpiece centre
